

# Dat Nguyen

datq.nguyen06@gmail.com | (408) 856-8287 | linkedin.com/in/datnguy3n | github.com/Da0t | dats-nguyen.vercel.app

## EDUCATION

### University of California, San Diego

B.S. Data Science & B.A. Economics.

Relevant Coursework: Data Structures & Algorithms, OOP, Data Science

La Jolla, CA

June 2028

## EXPERIENCE

### Co-Founder & Founding Software Engineer

June 2026 – Present

*Aria AI*

*San Jose, CA*

- Co-founded a consumer wearable AI startup, driving a launch to 25,000+ views in 24 hours and earning selection into Deepgram's startup program with 1,000+ sponsored API credits.
- Shipped an early-access conversion funnel by architecting a token-driven Tailwind design system across 10+ statically-generated components at a sub-140 KB first-load budget.
- Eliminated broken production deploys by configuring a GitHub Actions CI pipeline with lint, type-check, and smoke tests.

### Founding Software Engineer

May 2026 – Present

*Netra*

*San Diego, CA*

- Deployed the company website for a \$100k-funded startup via Nginx, Cloudflare, and GitHub Actions for automated testing.
- Designed the company's visual identity including the logo, website, investor-facing pitch decks, and marketing materials.

### Full-Stack Developer Intern

May 2026 – Present

*SEO USA*

*New York, NY (Remote)*

- Built a containerized RESTful API with Python, FastAPI, and Docker with Supabase and Firebase for authentication and access control.
- Improved PostgreSQL query performance by 15% via execution plan analysis and indexing on high-cardinality fields.
- Delivered full-stack features across a React frontend and Python backend in agile sprint cycles with CI/CD via GitHub Actions.

### Software Engineer Lead

Apr 2026 – Jul 2026

*AISC @ UC San Diego*

*La Jolla, CA*

- Built a production platform serving 350+ members with Next.js, React, and Tailwind CSS, achieving 20% load time reduction via ISR caching.
- Improved data retrieval by 60% migrating events from static JSON to Supabase PostgreSQL with schema design and RLS.

### Undergraduate Researcher, ML/AI

Mar 2026 – Jun 2026

*Economics Research Lab @ UC San Diego*

*La Jolla, CA*

- Trained a Random Forest classifier to 0.982 ROC-AUC and 0.92 F1 on informal settlement detection from 2,000+ satellite images using QGIS, Python, and GeoPandas.

## PROJECTS

### Aside AI <https://github.com/Da0t/AsideAI>

*1st Place, Deepgram Track — Berkeley AI Hackathon*

- Engineered a real-time AI wearable narrating a room in 1-2 seconds via a Raspberry Pi camera, Python backend, and React Native app.
- Built a Redis memory layer so AI personalities track narration history and build context across a session.

### Pylon <https://lattice-pm4d.vercel.app/>

*2nd Place, Bow Capital Hackathon*

- Built a terrain-aware simulation engine with BFS pathfinding, visualized through a real-time 3D tactical dashboard with 10+ custom deck.gl layers over Mapbox terrain.
- Implemented a leaderless UDP gossip mesh with NAT traversal and LRU deduplication, converging topology in under 2 seconds.

## SKILLS

**Languages:** Python, JavaScript/TypeScript, SQL, Java, Bash, R, HTML/CSS

**Frameworks & Libraries:** React, Next.js, FastAPI, Tailwind CSS, Expo/React Native, PyTorch, Scikit-Learn, Pandas, SciPy, Matplotlib, Seaborn, statsmodels, Streamlit, deck.gl, Springboot

**Databases:** PostgreSQL, SQLite, MySQL, Supabase, Firebase

**Tools & Platforms:** AWS (EC2, RDS, S3), Git/GitHub, Docker, Kubernetes, GitHub Actions, Databricks, Anaconda, Cloudflare, Nginx, Mapbox, QGIS, Claude Code, Codex, Redis
