EDUCATION

University of California, San Diego

La Jolla, CA

B.S. in Data Science and B.A. in Economics

Sept. 2024 – Jun. 2028

- **Relevant Coursework:** Principles of Data Science, Data Structures and Algorithms, Linear Algebra, Calculus I–III, Principles of Economics, Macroeconomics, Programming for Data Science

EXPERIENCE

CALPIRG Students – UC San Diego Chapter

2024 – Present

Volunteer Advocate

La Jolla, CA

- * Collaborated with student teams to support campus outreach and advocacy initiatives
- * Assisted in organizing campaigns focused on environmental and community engagement topics
- * Developed communication and leadership skills through public-facing events

PROJECTS

FRIENDS: Data-Driven Analysis for Enhanced Engagement

Jan 2025 – Mar 2025

Python, Pandas, Jupyter Notebooks

- * Built statistical and Bayesian models to analyze relationships between character roles, episode ratings, and audience viewership trends
- * Applied bootstrapping and hypothesis testing to identify factors influencing audience engagement
- * Created data visualizations and exploratory analyses to communicate findings clearly
- * Cleaned and structured raw datasets to support reproducible analysis workflows

Food Delivery Data Analysis

Jan 2026 – Present

Python, Pandas, Seaborn, Matplotlib, Statistical Testing

- * Analyzed food delivery data to study effects of prep time, delivery time, and cost on customer satisfaction
- * Performed exploratory data analysis and visualization to identify trends and relationships
- * Applied t-tests, confidence intervals, and effect size analysis to compare groups
- * Standardized and cleaned messy data formats to enable reproducible analysis workflows

Smart Temperature-Controlled Energy Dashboard

Jan 2026 – Present

ESP32, Arduino IDE, Python, Supabase, Streamlit

- * Programming ESP32 device in Arduino IDE to transmit sensor data to Supabase for cloud storage and analysis
- * Developing an IoT system using ESP32 microcontrollers and sensors to collect real-time temperature and energy data
- * Building a Streamlit dashboard to visualize power usage (W), cumulative energy consumption, and projected multi-device impact scenarios
- * Analyzing energy usage and cost savings under temperature-threshold control strategies using a fan as a case-study device.

TECHNICAL SKILLS

Languages: Python, Java, HTML/CSS, LaTeX, MATLAB

Libraries & Frameworks: pandas, NumPy, Matplotlib, Seaborn, GeoPandas, Streamlit

Data & Statistical Methods: Hypothesis Testing, Bootstrapping, Bayesian Modeling, t-tests, ANOVA, Effect Size Analysis, Data Cleaning, Data Visualization

Tools & Platforms: Git, Jupyter Notebooks/Lab, IntelliJ, Overleaf, Arduino IDE, Anaconda, Supabase, Excel, Google Sheets
